***FLEX** the heart of every SHARK seat*

Take one look at the SHARK suspension and you see it right away. Only one moving part (the shock absorber) mounted to two rugged and elegant injection-molded leaf-springs with a massive 225mm of vertical movement without any of the sharp edges or pinch points that are found on other suspension seats. There is also nothing to rust, no coatings to peel, just high-tech UV-protected **Flexanite™** with colour that is all the way through.

3D suspension works in every direction

The unique "**FLEX**" design absorbs impact in all three axes, handy, because waves don't just pitch straight up and down! **Flexanite™** composite plastic makes the shark **FLEX** system VERY light, yet robust, with minimal maintenance needed.

Strong Flexanite composite

FLEX has been tested to withstand over **one million 10G** impacts of more than 100ms duration at **120kg-140kg payloads** and the entire system complies to test protocols defines by the **UK and US military**.

Great comfort seated or standing posture

Despite this ruggedness, SHARK provides a supple ride – the softest available, like "**riding on a big marshmallow!**"

SHARK SUSPENSION SEATING – QUALITY WON'T COST THE EARTH

FLEX

Transforms any seat for a safer, softer ride

FLEX-HD

Up to 140kg of passenger weight and 225mm of travel

All SHARK seats are built for comfort and safety
